

Idealpos 7.1 Build 28 - Update History

Update Details:

Important notes for this build release:

Customers using the PLBPOS Interface must ensure that they update their configuration.

Refer to the PLBPOS Interface in the Update History below for further details.

PLBPOS INTERFACE.....	2
IP-4312 – PLBPOS INTERFACE – ABILITY TO ADD CREDENTIALS IN GLOBAL OPTIONS	2

PLBPOS Interface

IP-4312 – PLBPOS Interface – Ability to add credentials in Global Options

This function adds the ability to add PLBPOS Interface credentials in Global Options.

Any customers that are using the PLBPOS Interface will need to complete the below steps.

Go to: Back Office > Setup > Global Options > Interfaces > PLBPOS

When updating an existing site that already has PLBPOS enabled, ensure that the required details are entered into the following fields:

- Resource ID
- Client ID
- Client Secret

When configuring a new site, ensure that the above fields are configured, as well as the Tenant ID and CDC Prefixes.

The screenshot shows the 'global options' window for 'site 1 (Site 1)'. The 'Interfaces' tab is selected, and the 'PLBPOS Interface' sub-tab is active. The 'PLBPOS Interface' configuration panel includes the following fields and options:

- Enable PLBPOS Interface
- Tenant ID
- Resource ID
- Client ID
- Client Secret
- CDC Prefixes: 438875,50773899
- Enforce Restrictions

The 'Resource ID', 'Client ID', and 'Client Secret' fields are highlighted with an orange box. The 'PLBPOS' option in the left-hand list is highlighted with a blue box and a checkmark.
